Species

Species	Pod	Pollen	Comments	price
<i>Paph primulinum</i>			This is the true species from a selfing of an old collected plant that originated from Ratcliffe Orchids. Most of the plants sold as <i>Paphiopedilum primulinum</i> are actually hybrids. These imposters have spread all over the world, so unless you know the providence of a plant you probably have a hybrid.	\$150.00
<i>Paph delenatii album</i>	 Blanc de Blanc'	x sib	Here we have a select sibling cross from plants with their bloodlines originating from the Orchid Zone. This is an easy species to grow and can bloom pretty quickly from flask. This next generation should produce some outstanding results as we have selected for the fullest, flattest flowers from our breeding. I can't locate a photo of the pollen parent at the moment.	\$150.00

Paph Paradise September 2024 Flask List

<p><i>Paph delenatii dunkel</i></p>			<p>This is a select sibling cross of two of the best shaped, best colored and best growing plants that we have. This form of the species can be a little slow growing, so selecting for vigor is important. These will still take a bit longer to bloom than the 'type' form, but they are worth the wait. Striking, dark foliage and well shaped, intensely colored flowers are the calling card for the dunkel form of delenatii.</p> <p>***SALE PRICE***</p>	<p style="text-align: right;">\$99.00</p>
<p><i>Paph insigne</i></p>			<p>We crossed two unrelated variegated plants here. Variegation is usually caused by mutations called chimeras, which are not passed on to the progeny. We tried this anyway hoping that maybe a few variegated seedlings will show up. If nothing else we know both parents are prone to the mutation and perhaps we will get a handful of new variegated seedlings.</p>	<p style="text-align: right;">\$150.00</p>
<p><i>Paph druryi</i></p>			<p>This is a cross between two distinct breeding lines of this species. This should provide vigor. Both parents were excellent quality so we will see some nice results here. ****Very Limited***</p>	<p style="text-align: right;">\$195.00</p>

Hybrids				
Hybrid	Pod	Pollen	Comments	price
Paph Technicolor Paradise			This is a remake of this very beautiful hybrid. The cross is Paph (Magic Papradise 'Merlot' AM/AOS x victoria-mariae) . The foliage is quite attractive and the flowers have been wonderful. Using victora-mariae, which is the smallest of the sequential blooming species, makes the plants more compact than other similar hybrids. Our first cross bloomed very quickly out of flask so these will be vigorous growes.	\$150.00
Paph			Paph Chocolate Truffles is (Formosa Lady x glanduliferum). The goal was to get darker flowers on a comact plant. We crossed this to philippinense to maintain the long petals and hopefully increase the flower count. These should be small to moderate sized multifloral plants with colorful, shapely flowers.	\$150.00

Paph Paradise September 2024 Flask List

<p>Paph</p>			<p>Shin-Yi Michael is (Susan Booth x Michael Koopowitz), making it 25% each of <i>rothschildianum</i>, <i>philippinense</i>, <i>sanderianum</i> and <i>glanduliferum</i>. Crossing it to one of the very best <i>philippinense</i> should maintain long petals, with dark stripes from the roth and <i>glanduliferum</i>. This should be a very impressive multifloral hybrid.</p>	<p style="text-align: right;">\$150.00</p>
<p>Paph</p>			<p>We love fairrieanum hybrids. They always have that pleasing fairrieanum shape and they usually grow like weeds. We expect large red flowers on tall stems from this cross. There should be some wonderful flowers here. As our breeding program focuses on other areas this is likely to be the only type of complex hybrid we will make in the future. They are really a 'sure thing' when it comes to flower quality and ease of growth.</p>	<p style="text-align: right;">\$150.00</p>
